

DGEL TUBULAR BRAID

Ultra-Light,
Ultra-Strong &
Low Cost

Claim to fame

- 38 million Modulus Fiber means way stronger than the market best!
- 2 layers lay-up is all you need for 75% of your patients
- Double its strength yet when used in conjunction with DGEL Fiber Beam.
- Available in 4, 5, 6, 7, and 8 inch diameters to fill all your lay-up needs

Available in 5 yards or 25 yards

Feel the smoothness of the DGEL Carbon Braid, it feels like silk — this tells you that the DGEL Resin will soak right in without heavy stringing. Please notice that even after stretching the DGEL Tubular Braid the tight mesh does not open up and therefore even with only Two Layers, the lamination does not have any opened holes and is therefore as strong as laminations with 4 to 6 layers of Generic Braid — Do the math, it saves a lot of money!
