

The **SURE STANCE™** Knee with **STUMBLE-CONTROL™**

The choice of Amputees seeking a reduced risk of knee buckling.

**Weight-Activated
Stance Control
up to 35° flexion**

DAW®
Industries///

The world's first Polycentric knee with Weight-Activated Stance Control

Stumble-Control gives the Amputee the ideal safety net against buckling! Up to 35° flexion, knee flexion locks when the Amputee mis steps or stumbles.

Its Natural Swing-Phase replicates human knee biomechanics by shortening the prosthesis during flexion. This provides the Amputee with high toe-clearance free of hip hiking, vaulting, or walking with a shortened prosthesis.

Functional Level K3

Patient Weight Limit 250 lb 113 kg

Suggested L-Codes * : **L5816** **L5840** **L5845** **L5848** **L5850**
